Venue :
Apollo College of
Nursing Auditorium
Vengaloor to Ambaloor Main Road,
Amenahakkam, Chennai-95.

Apollo
College of Nursing

Organized By :
ALUMNI ASSOCIATION

Advances in Medical Technology - Nursing Implications

"We're arranged a civilization in which most crucial elements profoundly depends on science & technology"

- Dr. Carl Sagan

In today's world technology is constantly changing from a new paper clip to an improvement in medical technology. Advances in Medical technology have done a great deal to produce miraculous cures and recoveries.

Modern technology has enabled the Medical profession to refine methods of Diagnosing illness, disorders and to treat them more effectively than in the past. The future promises more high-tech, non-invasive technologies.

Nurses proudly espouse that they provide care in highly technological environment that focus on 'cure'. There is a evidence that nurses provide patient centered care in a technologically dominant world. The nature of such care is invariably dependent on the specific content of the user and the technology. This means Nurses require highly developed capabilities to 'situate' themselves within these specific contexts to focus on the particular needs of the patient.

Thus Alumni Association of Apollo College of Nursing, has organized a National seminar on 'Advances in Medical Technology - Nursing Implications', to teach the nurses to expect change and be prepared to adapt or retool their skills quickly to respond to health care demands.

DAY 1 - (29.04.10)

9.30am - 10.30am *Introduction on Advanced Diagnostic and treatment techniques*
